

SKY LINES

THE OFFICIAL WORLD OF ANTF

Modpack Manager

General Application Requirements

01

At Least 1 GB of Free Space on Drive
(App Size ~10 MB)

02

App Uses About ~230 MB of Ram

03

A Broadband or DSL Internet Connection

04

Runs on Windows 7 or windows 10

CONTENTS

- 01** Application GUI Overview
- 02** About Application and Behavior
- 03** Troubleshooting and Error Codes
- 04** Additional Resources/Links

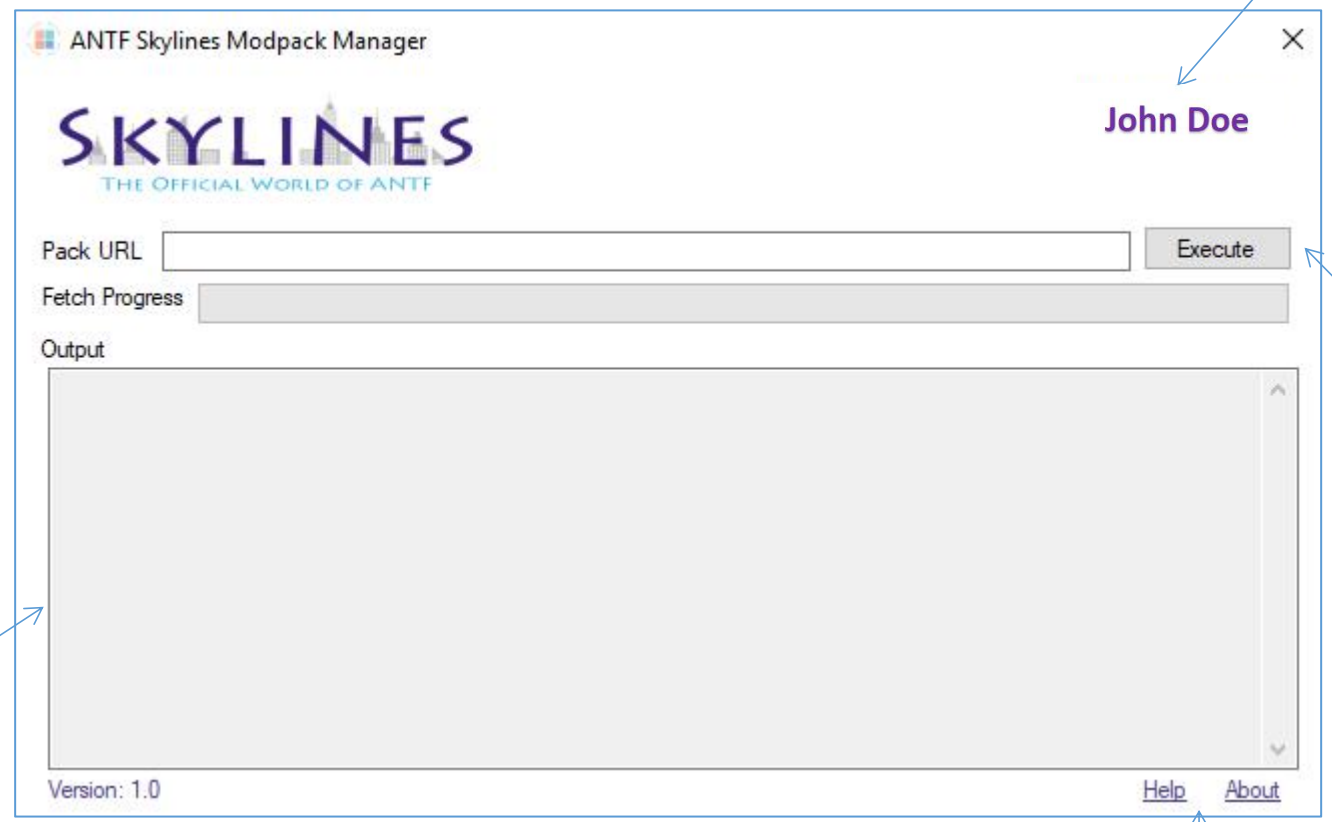

01

Shows Name of User Currently signed into the PC

Place ANTF Provided Modpack Manual download URL Here

Shows Modpack Download Progress. It is numerically noted in the output as well.

Output console similar to command line look, and shows the various steps occurring during the process!

Begins Process. You will be prompted with a warning. Read Carefully!

Access to Application information and Help and Support Documentation

Application Behavior

02

This software will attempt to download, unzip, and replace files within the ANTF City Dweller Mod in the Technic Launcher. It is important to note that one should only be using Manual Download Links approved by ANTF or from antfcorp.com. We are not responsible for links hosted on external pages and are not responsible for anything that occurs upon their use. It is also assumed that the Technic Launcher is installed in the default directory and is not the portable version. Technic must be closed prior to running this software

Assuming the correct link is applied, the application will perform the following operations in the following order:

- 1.The Application checks for any instances of previous instances of the modpack and deletes them as well as the current installed packs listing file. NOTE: IF YOU HAVE OTHER PACKS, YOU WILL NEED TO RE-INSTALL THEM! (A brief freeze may occur during this process)
- 2.Download Zip File from link to the current modpacks directory in Technic (if its already there it skips the download process)
- 3.Once the file is allocated, it is then extracted (unzipped) to the current directory. This process can take up to 2 minutes (depending on your PC) and may look like its frozen but it is not (it is simply processing 2,000+ files)
- 4.Once the unpacking is complete, the application adds missing directories that were lost during the unpacking phase, and then clones an installed packs file and moves it to the Technic directory. The software will display a done message at this point and it is now safe to open Technic and launch Minecraft. ANTF City Dweller should be shown as the only pack at this point.

Troubleshooting/Error Codes

03

In case of failures or issues, please be sure of the following:

1. Your machine is connected to the internet
2. Your Download Link is Valid (get it from ANTF's Site)
3. Make sure Minecraft and Technic Launcher are Closed
4. Make Sure Technic Launcher is Installed in Default Directory (Not the Portable Version)
5. Make sure you have Adequate Read/Write privileges on your system
6. Make sure your system has at least 1 gig of space avail for the I/O operations

**During some of the final phases of the operations, it is possible to encounter an error code:
See Table Below:**

Error code/Message	Reason
Download Failure/Aborted	Download was Interrupted, or is not Available
1A	Unable to clone Installed Packs File from App Binary
1B	New Installed packs file Move Failed (may be because the deletion method missed it or was unable to)
1C	Most But Not all Phases Completed (End Generic Error)
Generic Windows I/O Errors	Permissions can cause Read/Write and Move Command Issues as well as Unzipping and File Creation Issues
